

# Hospital Skid Units

## Decontamination Patient Isolation

- ▶ Rapid set up time, just turn on the lights and water
- ▶ Integrated into hospital systems, lowering maintenance cost
- ▶ Spacious non-ambulatory decon
- ▶ Easy electrical and plumbing hook-ups
- ▶ Negative pressure for isolation patients
- ▶ Custom built to meet your needs

ACSI Decon skids allow for the fastest and most efficient decon set up in the industry by integrating directly with the existing hospital power and water systems. Units can be customized to fit your hospital needs. Fixed site decon facilities allow for wider sizes which offer a more spacious interior decon. Non ambulatory patients can be handled on the interior through either lane. Giving your response team the flexibility to handle any situation.

ACSI fixed site decontamination facilities can even be integrated directly into the hospital to insure patients enter through the units decon line and don't contaminate the ER. Multiple sizes and configurations are available to meet the demanding needs of your facility.
